

We are a multi-modal transportation planning firm focused on **providing innovative transportation solutions** that are **practical, focused, and implementable**.

Our work is data-driven and informed by meaningful public and stakeholder engagement. We have a team of over 40 transportation planners, designers, and analysts with nationally renowned expertise in areas such as transit planning and operations, public participation, transportation demand management, and bike share. We view transportation as a tool to create better communities and pride ourselves in seeing our plans and ideas become reality.

We are an award-winning woman-owned small business founded in 2006. We are headquartered in Washington, DC, with additional offices in Baltimore, Boston, and Philadelphia. We are certified as a Disadvantaged/Woman Business Enterprise (DBE/WBE) and have worked on a very diverse array of projects in 30 states.

Passion for the profession. **Dedication** to our clients.
Investment in each other. **Positive** outlook.

FOURSQUARE ITP serves as both a prime and subcontractor for transit agencies, state and local departments of transportation, MPOs, and federal agencies. We collaborate with diverse communities—from urban to rural—to create context-sensitive transportation solutions.

Transit Service Planning

Implementable planning solutions. Using creative thinking and collaboration, we develop implementable service planning solutions for our clients based on big data and public/stakeholder input.

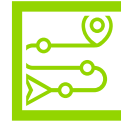

Transit Operations and Facilities Planning

Putting plans into practice. We bridge the gap between plans and their practical implementation, working with transit operations staff on the details of scheduling service, managing and procuring transit fleets, and optimizing operational systems and controls. Our data-driven and context-sensitive solutions for planning and conceptual design for transit stations and stops helps improve access to transit.

Corridor Planning

Making corridors accessible. Our strong transit planning capabilities and transit market assessment tools enable us to understand how people use and access a corridor and design services that can effectively serve it.

New Mobility

Integrating emerging transportation services and technology to achieve better outcomes today. Foursquare ITP has been at the forefront of planning for new mobility over the past decade, including microtransit and micromobility, and incorporating these modes with existing transit systems.

Regional and Statewide Planning

Rethinking the way we connect. We lead regional and statewide transportation plans that incorporate market analysis, existing transit services, and stakeholder and public input to develop short-, mid-, and long-range plans focused on the area's strategic goals and objectives.

TDM and Parking

Pushing boundaries in shared mobility and multi-modal experiences. We are national leaders in planning and implementation of Transportation Demand Management.

Bike/Ped Planning and Multimodal Access

Planning for the first-mile, last-mile, and all the miles in between. All travel—including all trips to transit stations—begins by walking or bicycling, be it a stroll to the corner bus stop or bike trip across town to work. Creating robust, safe, and vibrant multi-modal transportation systems starts by investing in active transportation.

Strategic and Financial Management

Helping transportation agencies do more with what they have. In this highly constrained funding environment, we help transit agencies and transportation departments at the state and local level maximize the value of their existing assets, be it staff, physical infrastructure, or funding.
